

Illustrated Catalogue

PERKINS, MAC'INTOSH & PERKINS

Stryj, Galicia,
Austria.

Manufacturers of Drilling
tools on improved Canadian
System.

1906.

PERKINS, MAC'INTOSH & PERKINS,
STRYJ, GALICIA, AUSTRIA.

We have pleasure in issuing a revised catalogue of tools manufactured by us. All earlier catalogues are obsolete.

Our calculations of the weights of tools are based on the tools used by us at our own Mines, but in the event of any Customers requiring lighter- or heavier-tools, or wishing to have special Threads cut on same, their wishes shall be met in every respect. The weights given are only approximate. A table of our threads will be found on page 78.

Illustrations of rig parts and various drilling and „fishing“ tools will be found on pages 61/113. As however improvements are constantly being made we reserve the right to alter the construction of our tools without notice.

Having been engaged in the Oil business during the last 35 years in Canada, Germany, Hungary and Galicia as Drillers, Oil Operators and Manufacturers of Boring Tools, we are in a position to let Customers have the benefit of our experience and shall always be glad to give our advice or any information on application.

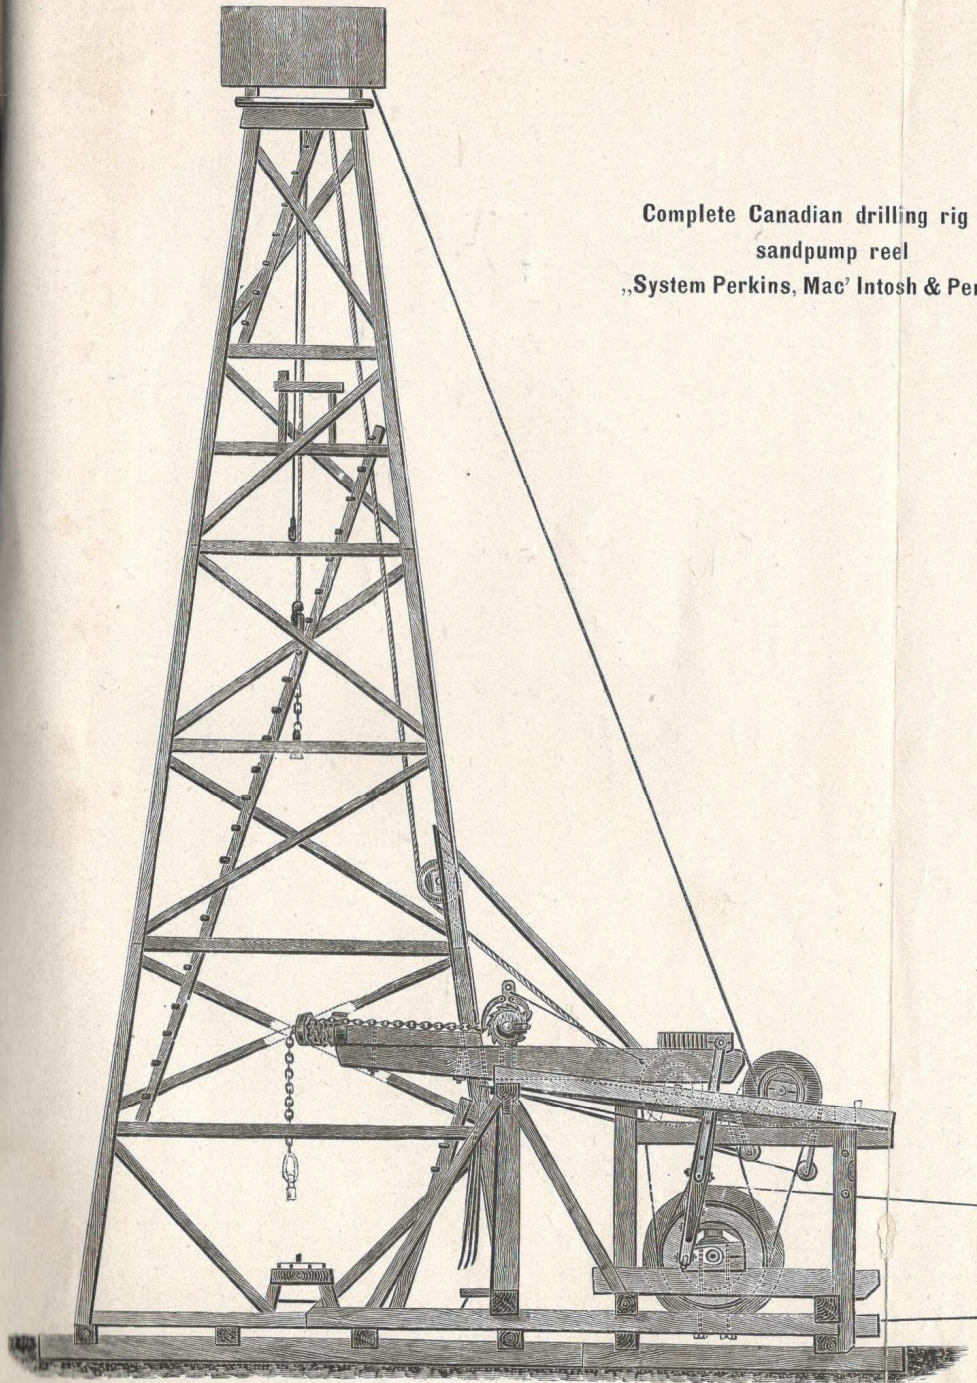

Special estimates and drawings will be made for any „fishing“ or other tools omitted from this Catalogue. Tenders for complete Drilling Outfits will also be prepared if Customers will inform us the number of wells intended to be bored, the manner in which these are to be distributed over the territory, and the formation to be drilled through. We have delivered complete outfits to Java, Spain, Persia and Africa and these have given complete satisfaction. Our tools are used extensively in Roumania and Galicia and are recognised as being unsurpassed for quality, style and finish.

Intending Purchasers may rest assured that any orders placed with us will receive most careful and prompt attention.

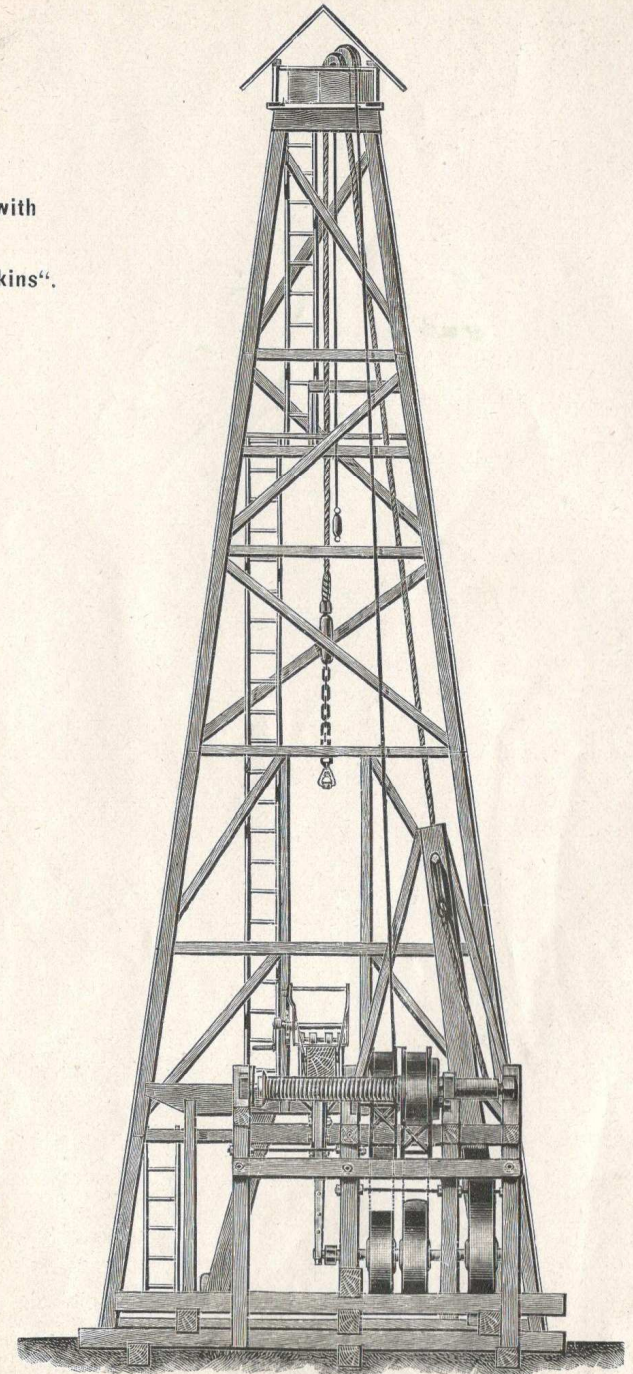

STRYJ, June 1st. 1906.

Perkins, Mac'Intosh & Perkins.

Complete Canadian drilling rig with
sandpump reel
